

Ethylene Absorber User Guide

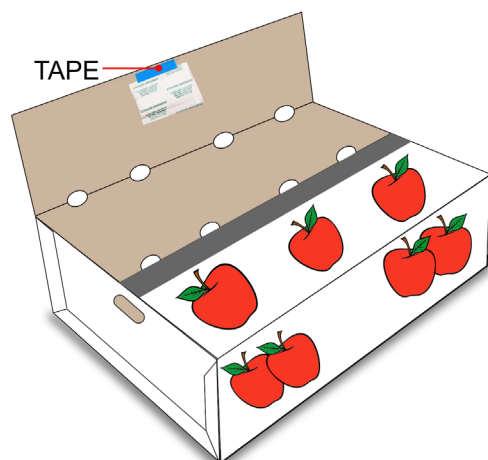

Model 19017 Mini-Packet, 5 grams

1. Remove Mini-Packets from the barrier bag packaging. Place one in each box of flowers or produce prior to shipping or storage for protection from ethylene from the time they're packed, throughout distribution and storage, until they reach the retail level.
2. The Mini-Packet can be placed directly on top of produce, as long as there isn't a lot of moisture present.
3. Staple or tape Mini-Packet to the inside of the box at the packing line. You can also attach it to the closure flap or box cover. This allows for maximum air flow through the material, and is also recommended in high moisture environments.
4. If using tape, use a small piece, just enough to attach the packet from its top edge without covering too much of the material, so air can still circulate through the absorber beads.
5. Use one Mini-Packet per 10 to 15 lb. box of produce traveling on short trips (20 days or less) with minimal cold storage. For longer trips, two Mini-Packets are recommended in a 15 to 20 lb. box.
 - Tyvek® packaging and ink are FDA Approved for Food Contact.
 - Organic compliant, OMRI Listed, NOP, CE approved.
 - Resistant to tearing, water and UV, highly porous, 100% recyclable.
 - Environmentally friendly, dispose in regular trash.

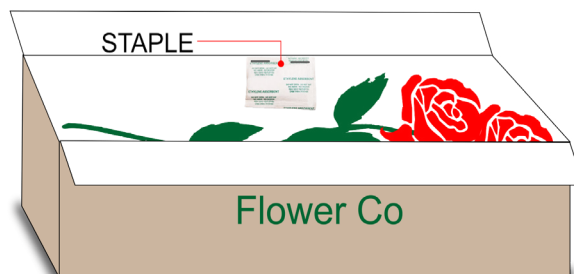

Attach with staple or tape on the top edge of the Mini-Packet.
Do not obstruct air flow through the absorber beads.

Attach to box closure flap

Attach at packing line, near the top of the box

Lay on top of produce
